ELSEVIER

Comput. Methods Appl. Mech. Engrg. 118 (1994) 419–422

Computer methods in applied mechanics and engineering

Subject index of Volume 118

Boundary element methods
An iterative solution strategy for boundary element equations from mixed boundary value problems, T.J. Urekew and J.J. Rencis 13– 28

Collocation method
Bubble stabilization of spectral Legendre methods for the advection-diffusion equation, C. Canuto and G. Puppo 239–263

Control theory
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem, M.D. Gunzburger and H.C. Lee 133–152

Coupled problems
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem, M.D. Gunzburger and H.C. Lee 133–152

Dynamics
A family of single-step Houbolt time integration algorithms for structural dynamics, J. Chung and G.M. Hulbert 1– 11
An improved one-point integration method for large strain elastoplastic analysis, L. Stainier and J.Ph. Ponthot 163–177

Elasticity
An efficient and locking-free flat anisotropic plate and shell triangular element, J. Argyris and L. Tenek 63–119
A particle method for history-dependent materials, D. Sulsky, Z. Chen and H.L. Schreyer 179–196

Finite element and matrix methods
An efficient and locking-free flat anisotropic plate and shell triangular element, J. Argyris and L. Tenek 63–119
Finite element approximation of an evolution problem modeling shear band formation, D.A. French and S.M.F. Garcia 153–161
An improved one-point integration method for large strain elastoplastic analysis, L. Stainier and J.Ph. Ponthot 163–177
Numerical techniques for the treatment of quasistatic viscoelastic stress problems in linear isotropic solids, S. Shaw, M.K. Warby, J.R. Whiteman, C. Dawson and M.F. Wheeler 211–237
Stress resultant geometrically nonlinear shell theory with drilling rotations—Part I. A consistent formulation, A. Ibrahimbegović 265–284
Stress resultant geometrically nonlinear shell theory with drilling rotations—Part II. Computational aspects, A. Ibrahimbegović and F. Frey 285–308

Finite element solution of compressible viscous flows using conservative variables, A. Soulaïmani and M. Fortin 319–350
On the convergence of a discrete Kirchhoff triangle method valid for shells of arbitrary shape, M. Bernadou, P. Mato Eiroa and P. Trouvé 373–391
A shear deformable plate element with an exact thin limit, F. Auricchio and R.L. Taylor 393–412

Fluid mechanics
Chebyshev pseudospectral multi-domain technique for viscous flow calculation, H.H. Yang and B. Shizgal 47– 61
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem, M.D. Gunzburger and H.C. Lee 133–152

Heat and diffusion
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem, M.D. Gunzburger and H.C. Lee 133–152

Matrix calculus
An efficient and locking-free flat anisotropic plate and shell triangular element, J. Argyris and L. Tenek 63–119

Miscellaneous topics
The application of automatic differentiation to problems in engineering analysis, S. Chinchalkar 197–207

Nonlinear mechanics
An efficient and locking-free flat anisotropic plate and shell triangular element, J. Argyris and L. Tenek 63–119
An improved one-point integration method for large strain elastoplastic analysis, L. Stainier and J.Ph. Ponthot 163–177
A particle method for history-dependent materials, D. Sulsky, Z. Chen and H.L. Schreyer 179–196

Numerical solution procedures
A family of single-step Houbolt time integration algorithms for structural dynamics, J. Chung and G.M. Hulbert 1– 11
An iterative solution strategy for boundary element equations from mixed boundary value problems, T.J. Urekew and J.J. Rencis 13– 28
Chebyshev pseudospectral multi-domain technique for viscous flow calculation, H.H. Yang and B. Shizgal 47– 61
An efficient and locking-free flat anisotropic plate and shell triangular element, J. Argyris and L. Tenek 63–119
Numerical analysis of compound jet disintegration, B.M. Tchavdarov, P.D. Minev and S.P. Radev 121–132
An improved one-point integration method for large strain elastoplastic analysis, L. Stainier and J.Ph. Ponthot 163–177
A particle method for history-dependent materials, D. Sulsky, Z. Chen and H.L. Schreyer 179–196
Numerical techniques for the treatment of quasistatic viscoelastic stress problems in linear isotropic solids, S. Shaw, M.K. Warby, J.R. Whiteman, C. Dawson and M.F. Wheeler 211–237
Multigrid acceleration for recirculating laminar and turbulent flows computed with a non-orthogonal, collocated finite-volume scheme, F.S. Lien and M.A. Leschziner 351–371

Basis of an improved hybrid node renumbering algorithm for matrix bandwidth reduction, D.G. Scott and R.P.S. Han 309–318
A shear deformable plate element with an exact thin limit, F. Auricchio and R.L. Taylor 393–412

Plasticity
Finite element approximation of an evolution problem modeling shear band formation, D.A. French and S.M.F. Garcia 153–161
An improved one-point integration method for large strain elastoplastic analysis, L. Stainier and J.Ph. Ponthot 163–177
A particle method for history-dependent materials, D. Sulsky, Z. Chen and H.L. Schreyer 179–196

Shells and plates
An efficient and locking-free flat anisotropic plate and shell triangular element, J. Argyris and L. Tenek 63–119
Stress resultant geometrically nonlinear shell theory with drilling rotations—Part I. A consistent formulation, A. Ibrahimbegović 265–284
Stress resultant geometrically nonlinear shell theory with drilling rotations—Part II. Computational aspects, A. Ibrahimbegović and F. Frey 285–308
On the convergence of a discrete Kirchhoff triangle method valid for shells of arbitrary shape, M. Bernadou, P. Mato Eiroa and P. Trouvé 373–391
A shear deformable plate element with an exact thin limit, F. Auricchio and R.L. Taylor 393–412

Solutions of ordinary and partial differential equations
A family of single-step Houbolt time integration algorithms for structural dynamics, J. Chung and G.M. Hulbert 1– 11
Bubble stabilization of spectral Legendre methods for the advection-diffusion equation, C. Canuto and G. Puppo 239–263

Stability in fluid mechanics
Note on the von Neumann stability of explicit one-dimensional advection schemes, B.P. Leonard 29– 46
Numerical analysis of compound jet disintegration, B.M. Tchavdarov, P.D. Minev and S.P. Radev 121–132

Stability in structural mechanics
A shear deformable plate element with an exact thin limit, F. Auricchio and R.L. Taylor 393–412

Structural mechanics
A family of single-step Houbolt time integration algorithms for structural dynamics, J. Chung and G.M. Hulbert 1– 11
An efficient and locking-free flat anisotropic plate and shell triangular element, J. Argyris and L. Tenek 63–119
An improved one-point integration method for large strain elastoplastic analysis, L. Stainier and J.Ph. Ponthot 163–177
Stress resultant geometrically nonlinear shell theory with drilling rotations—Part I. A consistent formulation, A. Ibrahimbegović 265–284
Stress resultant geometrically nonlinear shell theory with drilling rotations—Part II. Computational aspects, A. Ibrahimbegović and F. Frey 285–308
On the convergence of a discrete Kirchhoff triangle method valid for shells of arbitrary shape, M. Bernadou, P. Mato Eiroa and P. Trouvé 373–391

Supersonic flow
Finite element solution of compressible viscous flows using conservative variables, A. Soulaïmani and M. Fortin 319–350

Systems of linear and nonlinear simultaneous equations
An efficient and locking-free flat anisotropic plate and shell triangular element, J. Argyris and L. Tenek 63–119

Transonic flow
Finite element solution of compressible viscous flows using conservative variables, A. Soulaïmani and M. Fortin 319–350

Transport phenomena
Bubble stabilization of spectral Legendre methods for the advection-diffusion equation, C. Canuto and G. Puppo 239–263

Turbulence
Multigrid acceleration for recirculating laminar and turbulent flows computed with a non-orthogonal, collocated finite-volume scheme, F.S. Lien and M.A. Leschziner 351–371

Viscoleastic and viscoplastic media
Numerical techniques for the treatment of quasistatic viscoelastic stress problems in linear isotropic solids, S. Shaw, M.K. Warby, J.R. Whiteman, C. Dawson and M.F. Wheeler 211–237

Viscous flow
Finite element solution of compressible viscous flows using conservative variables, A. Soulaïmani and M. Fortin 319–350
Multigrid acceleration for recirculating laminar and turbulent flows computed with a non-orthogonal, collocated finite-volume scheme, F.S. Lien and M.A. Leschziner 351–371
